Summary

Experienced software engineer with nearly a *decade* of hands-on experience in areas such as C/C++, Java, Python, Go, web service development, high-load systems, and more.

Proficient in asynchronous and concurrent programming, databases, information security, Linux, and reverse engineering. Seeking new challenges and opportunities.

Experience

Booking.com (hybrid) (Senior) Software engineer (Data Privacy) 2022 - present

- Led the redesign and migration for a critical PII-storage service from bare-metal to Kubernetes, achieving a 400K RPS load and a 90% cost reduction, while future-proofing the platform for continued development. Using Spring Boot (Java) together with Apache Cassandra as a main storage and Kafka for further data ingestion.
- Spearheaded DMA compliance efforts, including requirements gathering, RFC development, implementation, and rigorous testing, minimising disruptions during transitions and enhancing clients experience through proactive support and monitoring.
- Mentored colleagues across departments, sharing technical expertise and fostering collaboration.

Yandex (hybrid) Software engineer (Mail) 2021 - 2022

- Worked with one of Europe's largest PostgreSQL installations.
- Participated in the implementation of archiving and restoring users data feature, achieving 10% PostgreSQL storage reduction.
- Utilised Boost, Linux, and C++ 17/20 for backend development and performance optimisation. Integrated AWS SDK for C++ with Boost.Asio coroutines.
- Onboarded interns and mentored less experienced colleagues.
- Revamped monitoring and alerting tool using Cython, enhancing performance (20%) and testability.

Guzik Technical Enterprises (hybrid) Software engineer 2019 - 2021

- Developed software from low-level hardware interaction to UIs for high-throughput analog to digital converters. Ensured code reviews and code quality across distributed (USA, Bulgaria) teams.
- Improved CI/CD of FPGA builds, achieving 100-200% time reduction and better visibility.
- Led the development of Python/CPython extension for the digitizer's SDK.

Freelancer (remote) 2014 - 2019

- Delivered 100+ projects, from minor enhancements to full-scale product development, primarily using PHP/JavaScript/Delphi.

Other activities 2013 - present

- Skilled in reverse engineering of Android apps.
- Participant and winner of information security competitions.
- Hobbyist experience with devices like Arduino, ESP8266/32, STM32, and Orange Pi.

Education

Master's degree in Computer Science, Novosibirsk State University paused

- Dived deep into functional programming, particularly Ruby and Scala.

Bachelor's degree in Computer Science, Novosibirsk State University 2019

- Majored in the automation of physical and technical research with GPA is 4.5/5.0.
- Thesis: Calibration of a stereo pair of cameras and 3D reconstruction using C++, Qt and OpenCV.
- Acquired foundational knowledge in areas like physics, computer architecture, network protocols, algorithms, data structures, machine learning, UNIX, micro-controllers and more.

Personal attributes

Outside of my professional life, I'm a lifelong learner, passionate about personal growth.

My current interests include surfing, snowboarding, yoga, cooking, investment, and mindfulness.
